DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species:

Species I corresponds to Fig. 4.

Species II corresponds to Figs. 5 & 6.

Species III corresponds to Fig. 8.

Species IV corresponds to Figs. 10 & 11.

The species are independent or distinct because all species I to IV have circuit configurations different from each other. Specifically, species I does not require averaging multiple frames 500 as required by species II; species III does not require memory array 1009 as required by species IV while species III requires TG1 and TG2 that are not required by species IV.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).
